

DVD Anti-Piracy Solutions

DVD-Video Protection Made Easy with All Pro Solutions and Fortium

All Pro Solutions and Fortium Technologies have joined forces in order to integrate Fortium's powerful anti-rip solutions into the Zeus and Olympus Series disc publishers. Owners of new Zeus or Olympus Series disc publishers can enjoy DVD-Video discs with the most powerful anti-rip copy protection available to put a stop to pirating.

Create hundreds of copy-protected video discs!

- Automate the DVD copy protection process by using Fortium integrated with Zeus or Olympus Series DVD Publishers from 2 to 7 drives and up to 900 disc capacity!
- Perfect resistance to professional ripping software.
- Application of protection takes only minutes and a job can be processed seamlessly for duplication without extending the normal workflow.
- Uses a dongle to keep track of licenses available. Add more licenses easily, anytime! One master equals one Master ISO file to be protected.

How it Works

Patonus introduces copy control encapsulation in areas of the disc not read by DVD players during playback. Complying with the DVD standard, the original content is not modified and play-back quality remains unaffected.

Patonus effectively controls access to the content by common ripping programs and provides effective, speed bump protection from unauthorised copying. The result is copy-controlled discs with playability matching that of unprotected DVDRs.

Complex content - including menus, special features, extras and even dual layers - are protected by the passive technology of Patonus, which ensures no changes are made to the original video files during analysis.

Patonus provides an ideal solution for consumer 'download-to-own' and in-store 'on demand' manufacturing.
