

PoINT Archive Gateway - Storage Management for Archiving.

- Drive letter access to Multiple Storage Devices and Cloud for Archive
 - Archive Gateway to multiple devices of all types.
 - Windows File System shares for Archiving Applications
 - Storage optimization, redundancy, security, write protection
- Optimized Archive Storage using File Container Volumes
 - Universal Disc Format (udf) containers – Standardized files readable on all systems
 - Native WORM file format
 - Encryption
 - Authentication – Verifies file is original
 - File Versioning
 - Virtual Optical Jukebox - Containers replicate physical media
- Retention Management Features
 - File/Folder deletion by specified age/time attributes
 - Support for NetApp Snapshot features
 - Optimized Archive Volume Migration
- Advanced Search and retrieval features
 - Transparent file access via Links on source folder with unique Pass-Thru (a) file retrieval
 - Shares using MS Server file system
 - Database Browser with folder/file/version search and retrieval
 - “Restore to location” selection
 -
- Supported Archive Storage Devices and Technologies
 - Certified Cloud Connector for Amazon S3®, Microsoft Azure®, NetApp Storage Grid/WebScale®, EMC Elastic Cloud Storage® and many others.
 - Optical Libraries via PoINT JBM Connector
 - LTO Tape Libraries
 - HD/NAS standard NFS/CIFS
 - NetApp Snap Lock
 - Appliances

PoINT Storage Manager - Automated Storage Tiering and Archiving

- Enterprise Wide Tiered Storage Management
 - Job/ Schedule Automation
 - Policy Based Tiering and Archiving process
 - Certified Tiering Solution for Windows, NetApp FAS, and EMC VNX for file system access using links at the data source folder.
 - Encryption of metadata (stub files)
- “Pass-thru” read access file system,
